

Michael Flagg is the Global Manager of Application Engineering for The Lincoln Electric Company in Cleveland, Ohio. Michael graduated from The Ohio State University in 1988 with a B.S. degree in Welding Engineering. He has been with The Lincoln Electric Company for over 30 Years. Twelve of those years were as a Technical Sales Representative in the Western Pennsylvania market where his responsibilities included selling and supporting all of Lincoln's product line including equipment, consumables, automation, and environmental systems. In 2001 Mike transitioned to the role of Application Engineer in Lincoln's Cleveland headquarters. There he focused on procedure development, inverter waveform creation, and specializing in Advanced Submerged Arc Welding applications. In 2009 Mike was named manager of the Application Engineering department. With a staff of 20 engineers and technologists, the AE department answers technical questions for customers and sales reps, evaluates new products for sale, and performs cost reduction analysis and procedure development for end users. In 2019 Mike was promoted to his present role of Global Manager of Application Engineering, charged with coordinating and directing the activities of Lincoln's 42 global Application and Automation centers.
